Project -Student Management Software

Project -Inventory Management Software

Project -Human Resource Management Software (HRMS)

Developed and enhanced a feature-rich HRMS solution to simplify and automate HR operations. Key features include:

- **Attendance and Location Tracking:** Implemented swipe-in/out functionality with geofencing and real-time map-based location tracking.
- **Leave, Shift, and Holiday Management:** Designed intuitive modules for configuring leave policies, shift schedules, and holiday settings.
- **Payroll Automation:** Integrated salary generation with attendance, leave, and shift data for seamless payroll processing.
- **Mailing Template Management:** Created a centralized system for storing customizable templates for emails, letters, and payslips.
- **Geofencing Integration:** Enabled location-based attendance validation for enhanced accuracy and compliance.
- **Scalable Backend Architecture:** Used PHP (CodeIgniter) for robust, maintainable backend logic.

Technologies: PHP (CodeIgniter), jQuery, Bootstrap, MySQL, Google Maps API.

This project optimized HR processes by providing a user-friendly interface and advanced automation, reducing manual workload and improving organizational productivity.

Project -

Multi Vendor ecommerce website
Restaurant Management System
Exam Portal of Institute
Quiz app by PHP
School Management System

project Name - Degiacademy.co.in

Project Details :
Here students or any people can find registered teachers in any stream and are able to send a join request to selected teachers. Both teacher and student have an admin panel where they can change their password and edit their profile. Refer and Earn, review and billing system are provided in registered teacher or member’s admin panel where they generate invoice and check payment due of their accepted students and can see student requests and are able to accept or reject the student.
